DETAILED ACTION

Allowable Subject Matter

1. **Claims 1-87** are allowed.
2. The following is an examiner's statement of reasons for allowance: Schmutz teaches a method and apparatus for detecting signaling tones in wide-band digitized cellular-telephone signals.

The prior art of record does not teach generating a refined estimate of the one or more signal parameters of each respective tone of the plurality of tones, wherein the generating includes updating the one or more signal parameter estimates accordingly, and wherein the generating a refined estimate is performed in an iterative fashion.

The prior art of record also does not teach determining final or more signal parameter estimates for each of the plurality of tones based on the modified frequency response data of the plurality of the plurality of tones.

The prior art of record also does not teach removing effects of other tones of the plurality of tones from the frequency response data of the potential local peak of the respective tone using the stored one or more signal parameter estimates of each of the other tones, thereby generating modified frequency response data for the respective tone.

The prior art of record also does not teach performing steps in an iterative manner until the number of iterations exceeds a threshold number of iterations, or the difference between values of the signal parameters of the knowledge base and values of the signal parameters of the prior knowledge base is less than a threshold value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schmutz teaches a method and apparatus for detecting signaling tones in wide-band digitized cellular-telephone signals.
